

Door Lock & Jamb protector

The surge in crime is not simply a matter of burglary involving theft of valuable property, but a growing trend of mindless vandalism. 'Dri-Guard' is a simple, inexpensive product, for widespread use to prevent all but the most determined of highly equipped intruders from breaking the mortise locks. 'Dri-Guard' is a heavy duty steel, channel-shaped, mounting shoe, fitting over the leading edge of a door, with shield plates either side of the frame, fixed by through screw-bolts and powder coated finished in brown.

We at JML Hardware, are pleased to announce that we are sole suppliers and distributors of 'Dri-Guard' internal opening (top picture) and external opening (bottom picture) mortise lock shields. Crime against property is inexorably rising. Break-ins at your homes, schools, hospitals, commercial and office premises are becoming all too frequent. "Dri-Guard" is an improved mortise lock shield to prevent any would-be intruder from breaking and bursting the lock.

Both guards can be manufactured to customer requirement.
For details of any of the above please contact Stuart or Phil on 01942 715678.
